

DARYL CECILE

An ambitious, curious, and challenge-driven developer from Mauritius (an island off the coast of Madagascar)

I am driven by opportunities of innovation, knowledge sharing and documentation, and have a passion for providing the best user experience.

My interests consists of a mix of front-end design, frameworks like Next.js, developer tooling, and cloud infrastructure.

Experience

CapitalOne UK Software Engineer

May '21 - Now

Working in a developer-tooling team; creating infrastructure, internal developer tools, and sharing knowledge of AWS Cloud solutions. This role covers some DevRel and developer advocacy work through encouragement and support of migrations to AWS Cloud services from on-prem.

Additionally working on tooling to simplify developer experience, and providing dev resources when capacity allows; all while providing training where required, and ensuring developers are onboarded in an industry-compliant way.

When not assisting with migration and CI/CD pipeline work, I work on tools ranging from package-management, chrome extension, dev-env automation, and more.

Distinction Ltd Software Engineer

Jun '20 - Jul '21

Worked with clients across a wide range of domains, to create, maintain, and migrate their websites. As a software engineer at Distinction, I work mostly with Kentico CMS, C# (with .NET Framework), NodeJS, as well as the front-end technology stacks.

I contributed towards the creation and release of a major client website, worked with clients to resolve issues and implement changes that lead to more efficient and stable products, and initiated process changes based on recommendations I made to simplify development and enable cost-saving. During my time at Distinction, I continue to upskill in Kentico, Pantheon, and Umbraco CMS.

ERT Associate Software Developer

Aug '18 - Jul '19

I had the opportunity to work as part of the research and development team at ERT during a year-long placement where my duties included; feature design and implementation, as well as maintaining databases. Further to these, I was able to put my knowledge of JavaScript, C# and .NET to use in a larger scale product, while learning how to make these more efficient.

ProjectFunction Ltd Co-Founder/Educator

Jul '18 - Jul '21

Created opportunities for people to learn and get into the tech industry by providing free courses to those who are underrepresented in the field. As the primary developer, I developed and maintained both the product website and the learning hub, which were originally in PHP, but later migrated to Next.js. This role also involved working with industry partners and sponsors, to negotiate and form collaborations.

Code-First:Girls Coding Coach

Mar - Jun '16

Worked as a team to provide coding assistance and mentorship to students aged 17+ with JavaScript, PHP, CSS, and HTML. Assisted students in acquiring skills to write efficient code, as well as providing implementation methods for their individual project ideas. In some cases, the individual has gone away to launch their startups, based on the ideas and guidance.
